

Privacy Screens / Modesty Panels

from 100% recycled drink bottles

People are more productive in a less noisy environment. Acoustic desk screens and modesty panels may be the quickest way of addressing excess noise within an office. Normal desk screens create a private work space, whilst our acoustic screens also function as a suitable barrier to break reverberation and absorb excessive noise. Furthermore our acoustic panels are made from 100% recycled drink bottles, which means you care about the planet earth as well as your own health.

Specifications
